

Orange County Choppers of New York, USA, endorse Nordson equipment

American Chopper, on The Discovery Channel, follows the work of the fanatical team at Orange County Choppers (OCC) as it builds its renowned, signature motorcycles from the ground up.

What began as a small custom motorcycle shop in 1999 is now a worldwide phenomenon thanks to the power of television and the popularity of reality based programming.

And now, part of OCC's signature production process includes Nordson powder coating equipment.

OCC was unhappy with the quality it was getting from its coating supplier and was looking for a better option, and so they selected a custom coater that was using Nordson equipment.

In addition OCC's in-house production facility uses Prodigy™ HDLV™ dense phase technology that ensures they have only the best finish for their high-profile products.

"Many of us at Nordson are fans of American Chopper" says Bob Allsop, Marketing Manager for powder coating systems. "Powder coating was often mentioned on the show, and at least one episode featured the equipment that OCC was previously using. Unfortunately that particular coater didn't have Nordson equipment. Obviously, we wanted to change that, which we were able to do by providing OCC with a solution that better met their needs"

The fellas at Orange County Choppers are

Strong on performance
Strong on quality

They rely on Nordson technology to

✦ Paint Faster

✦ Save Powder

✦ Improve Finish

When only the **BEST** will do,
rely on **Nordson**.
